

METHOD AND SYSTEM FOR MANUAL ADMISSION  
CONTROL WITH USER OPTIONS

ABSTRACT OF THE INVENTION

5           A call manager receives a call setup request for a  
Voice over Internet Protocol (VoP) call from a phone  
having an associated call originator. The call manager  
then determines whether sufficient bandwidth exists for  
the VoP call over a link using a bandwidth table. If  
10 insufficient bandwidth exists on the link for the VoP  
call, the call manager presents a plurality of call  
completion options to the call originator. One of the  
call completion options is a public switched telephone  
network (PSTN) option. In response to the selection of  
15 the PSTN option, the call manager routes the VoP call  
over a PSTN.
